

## **Low Impact Collisions And Injury Rene Cailliet, MD, 2006**

**“Simulated impacts have been studied extensively and essentially confirm that a low-speed impact with minimal or no damage to the impacted vehicle can and does cause significant musculoskeletal injury to the driver’s or occupant’s head and neck.” p. 4**

**“It has been shown that high speeds are not specifically pertinent in determining the extent of the [whiplash] injuries sustained.” p. 32**

**“Numerous injuries result from vehicular accidents even when the impacts are not very big and there is minimal damage to both vehicles.” p. 87**

**“In many instances, a person experiences whiplash after a vehicle accident that has caused little significant damage to either vehicle.” p. 100**
